py2pack allows to generate RPM spec or DEB dsc files from Python modules, to list Python modules or search for them on the Python Package Index (PyPI). Conveniently, it can fetch tarballs and changelogs making it an universal tool to package Python modules.

# CHAPTER 1

---

## Templates

---

py2pack uses [Jinja2](#) based templates to generate RPM spec or DEB dsc files. There are multiple directories used to search for templates:

- `~/.py2pack/templates/`
- `/usr/share/py2pack/templates/`
- `prefix/lib/pythonX.Y/site-packages/py2pack/templates/` (included in py2pack)

Template files found in the first search path (`~/.py2pack/templates/`) win. To get a list of available templates, do:

```
$ py2pack generate -h
```
